HTML & CSS Practical Assignments

45 assignments across 9 modules

Module 1: Setup & Git	
1	Write a one-paragraph explanation of what happens between typing a URL and seeing the page.
2	Submit a screenshot proving VS Code, Node.js, and Live Server are installed correctly.
3	Complete a short terminal-navigation practice sheet.
4	Submit a repository with at least three meaningful commits.
5	Share the pushed GitHub repository link as proof of setup.

Module 2: HTML Basics	
6	Build a basic HTML page with a title and a few headings.
7	Design a simple resume-style page using only text elements.
8	Refactor the resume page to use semantic containers instead of plain text blocks.
9	Debug and correct a supplied buggy HTML file.
10	Submit the finished personal-introduction HTML page.

Module 3: Links, Images & Lists	
11	Create a portfolio page with working internal navigation.
12	Ensure every image on the portfolio page has a meaningful alt attribute.
13	Create a structured 'my college / my course' info page using lists.
14	Improve an earlier assignment page using correct semantic tags.
15	Submit the completed personal blog / portfolio page.

Module 4: Forms, Tables & Metadata	
16	Create a student-registration form using basic input types.
17	Build a job-application style form using every input type covered.
18	Build an e-commerce-style product size-chart table.
19	Audit every earlier HTML file and add missing meta tags.
20	Submit the complete multi-page HTML project (Home, About, Registration, Contact).

Module 5: CSS Fundamentals	
21	Convert one HTML-only page from Week 4 into a lightly styled page.
22	Style a page using at least four different selector types correctly.
23	Restyle the resume page with a proper font pairing and colour palette.
24	Create a small design-token stylesheet (colours, font sizes) using CSS variables.
25	Submit the styled multi-page project with a short note on design choices.

Module 6: Box Model & Positioning	
26	Annotate a screenshot explaining the box model of one of your own elements.
27	Create three differently styled card variants using border-radius and backgrounds.
28	Fix a supplied page where overflow is breaking the layout.
29	Style a landing-page hero section using position and z-index.
30	Submit the finished profile-card / product-card component.

Module 7: Flexbox	
31	Create a simple responsive menu bar using display:flex.
32	Create a perfectly centred login-form layout using Flexbox.
33	Build a product-listing style layout using flex-wrap.
34	Build a responsive Navbar + Hero section using Flexbox.
35	Submit the finished Flexbox landing-page section.

Module 8: CSS Grid	
36	Build a simple photo gallery using CSS Grid.
37	Build a responsive product grid that reflows automatically.
38	Recreate a simple dashboard layout using named grid areas.
39	Build a responsive product grid with a header and sidebar using Grid.
40	Submit the finished Grid-based project.

Module 9: Responsive Design & Integration	
41	Add at least two breakpoints to an earlier project and test on multiple screen sizes.
42	Audit and fix responsiveness issues in one earlier project.
43	Recreate a simple reference landing page using both Grid and Flexbox appropriately.
44	Push the landing-page HTML skeleton and base desktop styles.
45	Submit the finished, fully responsive landing-page project.
